Kevin Caudell

Ashburn, VA 20147 | kevin.caudell.1@gmail.com | (571) 299-8573 | GitHub: github.com/KevinCaudell

Aspiring data engineer passionate about using data engineering to support business intelligence and decision making. Hands-on experience building data pipelines on a cloud stack and performing exploratory data analysis in Python. Eager to apply my SQL, Python, and cloud data platform knowledge to develop my data engineering skills to help solve real world business problems.

EDUCATION

Bachelor of Science in Information Technology May 2028
Concentration: Software Solutions (SWSL), Computing Platforms & Infrastructure (CPI)
George Mason University, Fairfax, Virginia GPA: 3.74

SKILLS & CERTIFICATIONS

Languages: & Databases: Python, SQL, MySQL, Azure SQL, JavaScript, R (Elementary)
Data Engineering & Analytics: ETL/ELT, Data Cleaning, Exploratory Data Analysis, PySpark (Elementary), Relational Databases, Data Modeling
Cloud & Visualizations: Azure Blob Storage, Azure SQL Database, Databricks, Power BI (Elementary)
Certifications: Azure Data Fundamentals (DP-900), Microsoft Office: Excel Expert (2019) & Word Expert (2019), Azure Databricks Data Engineering Associate (In Progress)
Tools: Git, GitHub, VS Code, Node.js, REST APIs

WORK EXPERIENCE

Undergraduate Research Assistant – Data Engineer September 2026 - Present
George Mason University – Humanitarian Informatics Lab, Fairfax, Virginia

- Performed exploratory data analysis in Python using Pandas on CSV datasets to evaluate data attributes, patterns, and potential usefulness for a machine learning model supporting pre-disaster flooding evacuation in Virginia Beach
- Presented EDA findings to data scientists and researchers to communicate data characteristics and support decisions about which datasets could contribute to the model
- Collaborated with researchers and data scientists to understand data needs and contribute to an interdisciplinary research effort

Python Mentor – Dual Enrollment Program March 2026 -May 2026
George Mason University, Fairfax, Virginia

- Mentored 9th-grade students in NOVA's ITP150 course, explaining programming concepts and helping students develop algorithmic problem-solving skills
- Guided students through debugging logic errors involving data structures, loops, & conditional logic

PROJECTS

Rocket League ELT Pipeline | *Personal*

- Independently designed and implemented an end-to-end cloud ELT pipeline to ingest Rocket League replay data from the Ballchasing API and move raw data through storage, transformation, and analytics-ready layers
- Built a Bronze/Silver/Gold medallion architecture with Azure Blob Storage and Databricks to progressively clean, normalize, and transform semi-structured JSON replay data using PySpark
- Automated pipeline execution with Databricks jobs and orchestration workflows and created two introductory Power BI dashboards to gain hand-on experience presenting pipeline outputs
- Designed the project alongside the use of AI to develop a practical understanding of how data moves from API to storage and visualizations while simultaneously learning how to proactively use AI as a tool

NeighborCart – System Analysis & Design Project | *Academic*

- Led a five person team through a semester long system design project for a centralized local shopping platform intended to provide an alternative to large e-commerce marketplaces
- Defined system scope, stakeholders, functional vs non-functional requirements, feasibility considerations, risks, and supporting system documentation across three phases
- Designed the relational database structure by identifying entities, attributes, primary and foreign keys, relationships, and normalization requirements; created the ERD in MySQL Workbench
- Developed the system class diagram and coordinated team schedules, project tasks, and deliverables to keep the group on track
